                                                                                                                                                                                     ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a non-naturally occurring human epidermal growth factor receptor (HER)-3 variant polypeptide comprising amino acids 19-329 or 20-329 of the 1342 amino acid HER3 polypeptide (ABB6761) or a corea which differs from native HER3 polypeptide and having amino acid substitutions at residues E43, N44, K51, E64, V66 and V110 of S1, is new. The variant HER-3 specifically binds to the heregulin polypeptide (ADB67621), or has an ability to interact with HER2 polypeptide (ADB67621), or has an ability to inhibit the interaction between wild-type HER3 and heregulin. The polypeptide is useful for identifying a compound which specifically binds to heregulin binding domain in a HER3 variant polypeptide. The method further involves determining whether the test compound inhibits or enhances the heregulin induced tyrosine kinase activity associated with a HER3 polypeptide. The polypeptide is also useful for determining whether a test compound modulaces the interaction between a heregullin polypeptide, and the variant HER-3 polypeptide is also useful for variant HER-3 polypeptide is also useful for

The invention may also be useful for the development of cytostatic compounds through the regulation of the expression of a gene or activity of a protein associated with malignant neoplasia. The method is useful for prediction, diagnosis or prognosis of malignant neoplasia such as breast cancer, ovarian cancer, pastric cancer, colon cancer, oesophageal cancer, mesenchymal cancer, bladder cancer or non-small cell ung cancer. The polynuclectides and polypeptides defined in the specification, antisense polymuclectides targetting the polymuclectides, antichedies targetting the polymuclectides, and compounds identified by the screening methods are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Predicting, diagnosing or prognosing malignant neoplasia by detecting at least two markers, where the markers are genes from one or more chromosomal regions altered in malignant neoplasia,.

                                                                                                                                                                                                                     The present invention describes a polypeptide (I) comprising a component selected from: (a) a polypeptide epitope having any of the 503 fully defined sequences of 8-33 amino acids (SEQ ID NO:108-610); (b) an epitope cluster comprising the polypeptide of (a); (c) a polypeptide having substantial similarity to (a) or (b); (d) a polypeptide having functional similarity to any of (a)-(c); or (e) a nucleic acid encoding the polypeptide of (a)-(d). (I) has vincide and cytostatic activities, and can be used in vaccines. The methods and compositions of the present invention are useful for the diagnosis and/or treatment of viral infections, cancers and tumours. The present sequence is used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosaing immune related disorders in mammals. The immune related disorders in mammals. The immune arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, sutcimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating diseases of the duillath-Barre syndrome and chronic inflammatory demyelinating polyneuropathy, polyneuropathy. This sequence represents a human PRO polypeptide of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Production growth factor receptor precursor - chicken
N;Contains: protein-tyrosine kinase (EC 2.7.1.112) erbB
C;Species: Gallus gallus (chicken)
C;Date: 28-Feb-1986 #sequence_revision 05-May-1995 #text_change 09-Jul-2004
C;Accession: A27720; A00643

R; Plowman, G.D.; Culouscou, J.M.; Whitney, G.S.; Green, J.M.; Carlton, G.W.; Foy, L.; N

Proc., Natl. Acad. Sci. US.A. 90, 1746-1750, 1933

A; Title: Ligand-specific activation of HER4(P1980erbB4, a fourth member of the epidermal A; Reference number: A47253

A; Accession: A47253

A; Accession: A47253

A; Accession: A47253

A; Residues: Dreliminary; not compared with conceptual translation

A; Molecule type: nucleic acid

A; Molecule type: nucleic acid

A; Residues: 1-1308 cPLO.

A; Notes: sequence extracted from NCBI backbone (NCBIP:126842)

C; Superfamily: epidermal growth factor receptor; protein kinase homology

C; Keywords: AFF; growth factor receptor; protein kinase homology

F; 716-981/Domain: protein kinase ATP-binding motif

NyAlternate names: ErbB3 protein; HER3 protein
C;Species: Rattus norvegicus (Norway rat)
C;Date: 17-Jan-1996 #sequence_revision 19-Apr-1996 #text_change 16-Aug-2004
C;Accession: JC4387
R;HellyPer, N.J.; Kim, H.H.; Greaves, C.H.; Sierke, S.L.; Koland, J.G.
Gene 165, 279-284, 1995
A;Title: Cloning of the rat ErbB3 cDNA and characterization of the recombinant
A;Reference number: JC4387; MUID:96096535; PMID:8522190
                                                                                                                                                                                                                                                                                                                                                                                                                       MIDSECRPRERIVSEFSRMARDPORFVVIQNEDLGPA---SPLDSTFYRSLLEDDDMGD 1016

tentoxilysin (EC 3.4.24.68) precursor - Clostridium tetani
N;Alternate names: tetanus neurotoxin
C;Species: Clostridium tetani
C;Date: 31-Mar-1988 #sequence revision 31-Mar-1988 #text change 09-Jul-2004
C;Accession: A25689; A25757; Ā25194; B25194; A60759; S69348; S09364

C; Comment: The gource of this protein was an extrachromosomal plasmid.
C; Comment: The precursor is cleaved by endogenous proteinase activity to form light (fra dual chains are not toxic when separated). The amino end of the heavy chain (fragment B) C; Comment: Pragment D forms inon channels in a lipid bilayer. Fragment C binds to garglid C; Comment: This potent neurotoxin binds to peripheral neuronal synapses, is internalized presynaptic neurons. It inhibits neurotransmitter release by proteolytic cleavage of sy
                                                                                                                                                                                                                                                                                                                                                                                              C.Function:
A.Description: blocks neuroexocytosis via hydrolysis of a Gln-Phe peptide bond in synapt

                                Nat. Struct. Biol. 4:788-792(1997).

-I. Struct. Biol. 4:788-792(1997).

-I. FUNCTION: Tetamus toxin acts by inhibiting neurotransmitter release. It binds to peripheral neuronal synapses, is internalized and moves by retrograde transport up the axon into the spinal cord where it can move between postsynaptic and presynaptic neurons. It inhibits neurotransmitter release by acting as a zinc endopeptidase that catalyzes the hydrolysis of the 76-Gln-|-Phe-77 bond of synaptobrevin-2.

-I. CATALYTIC ACTIVITY: Hydrolysis of 76-Gln-|-Phe-77 bond in
                                                                                                                                                                                                                                                                                                                                                                                                                                        synaptobrevin 2.

COFACTOR: Binds 1 zinc ion per subunit (By similarity).

SUBUNIT: The precursor polypeptide is subsequently cleaved to yield subchains L and H. These remain linked by a disulfide bridge and are non-toxic after separation.

MISCELLANEOUS: The C-terminus of the heavy chain binds to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Zinc (catalytic) (By similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         By similarity.
